

Akshay joined Novelis in Oct 2018 and is responsible for structural modeling and performance of automotive body designs created by the CSC or automotive customers - from full vehicle crash models to component models. Most of my background is in Automotive Crash Safety which includes full vehicle crash CAE, crash testing and restraints development at multiple companies. Most recently, Akshay worked in the Crash Safety department at Ford Motor Company, where he was responsible for modeling and analyzing various crash modes and correlating them with real crash tests. Previously, he worked in restraint development at Tata Motors Engineering Research Center. Akshay holds a master's degree in Automotive Engineering from Clemson University and a bachelor's degree from Shivaji University in India
